

## **DX Geothermal Technology**

Earthlinked® Direct Exchange (DX) Geothermal Systems use the natural heating and cooling potential of the earth for the “direct exchange” of energy, eliminating the inefficient water circulation and secondary heat transfer required for water-based geothermal systems. Copper earth-loops installed to shallow depths (less than 100 feet) require smaller drill rigs and less time to install, resulting in cost savings for your customer. Increased COP and year-round hot water production result in lower operating costs and faster payback.

## **Dealer Training**

Our rigorous two-day dealer training provides one of the most comprehensive installation programs in the industry. Prospective dealers learn to size systems and select the most appropriate configuration, as well as the detailed process for completing successful installations.

## **What it takes**

EarthLinked® Technologies and ECS Geothermal Systems provide our dealer network with qualified sales leads, training and support. If you would like to become an authorized EarthLinked® dealer, please complete the enclosed Installation Training Registration Form or visit <http://www.earthlinked.com/dealer-info/seminars>.
